

# Stellar, solar and lunar demonstrators

Rosa M. Ros, Francis Berthomieu

*International Astronomical Union  
Technical University of Catalonia, Spain  
CLEA, France*

# Goals

- Understand the apparent motions of stars as seen from different latitudes
- Understand the apparent motions of the Sun as seen from different latitudes
- Understand the Moon's movement and shapes as seen from different latitudes

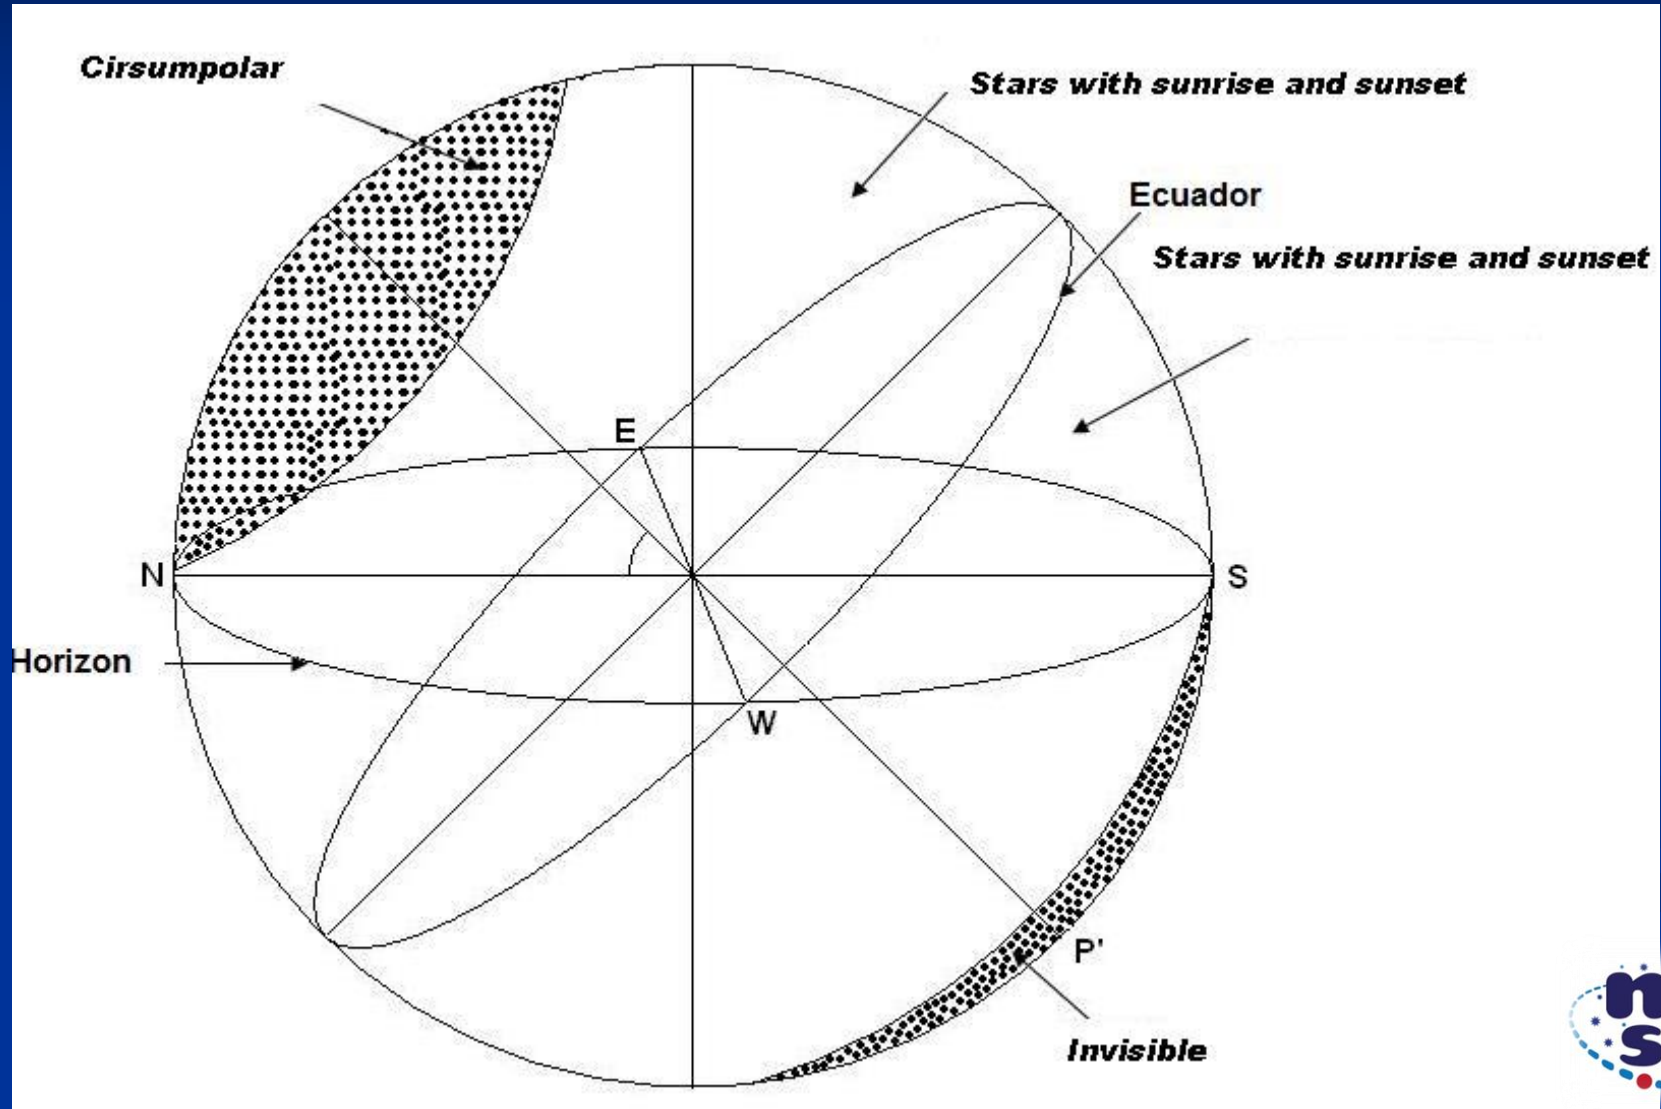

# Activity 1: Stellar demonstrator for showing:

- The paths of the stars in the sky
- Circumpolar stars, stars that rise and set and stars that don't rise or set
- Travel anywhere if you know the latitude (You can build a simulator for each location)

# Circumpolar / stars that rise & set / stars that don't rise or set

# Stellar Demonstrator

# Stellar demonstrator for the Northern Hemisphere

# Stellar demonstrator for the Southern Hemisphere

# Blank stellar demonstrator

(add desired constellations)

- Spring
- Summer
- Autumn
- Winter
- or each month

# Construction

- The explanations given for construction depend on your location:
- Northern hemisphere
- *Southern hemisphere*

# Building instructions - Step 1

- Make a photocopy on heavy-weight paper
- Cut both pieces (the big one and the small one) along the continuous lines
- Remove the black areas
- Fold the main piece along the straight dotted line

## Building instructions - Step 2

- Cut a small notch above the “N” (Northern hemisphere) in the horizon disk *or the “S” (Southern hemisphere) in the horizon disk*
- Glue the North-East quadrant (Northern hemisphere) of the horizon disk onto the grey quadrant of the main piece. The “W” point must match up with latitude  $90^\circ$  *or the South-West quadrant (Southern hemisphere) of the horizon disk onto the grey quadrant of the main piece. The “E” point must match up with latitude  $90^\circ$ .*

Try to be careful in this operation because the accuracy of model depends on the correct alignment of the two parts.

# Building instructions - Step 3

- Fit the incision “N” (Northern hemisphere) into the quadrant over the degrees of latitude  
*or the incision “S” (Southern hemisphere) in the quadrant over the degrees of latitude*
- Hold the horizon disk perpendicular to the latitude degree disk
- Begin to use by setting it for any desired latitude...

# The tilts of stellar paths

Lat  $70^{\circ}$   
Enontekiö  
Finland

Lat  $41^{\circ}$   
Montseny  
Spain

Lat  $23^{\circ}$   
Matehuala  
Mexico

# Where is the sunrise?

Is this picture correct?

The sunrise is always due East and  
the sunset is always due West.  
Is this correct?

...with another demonstrator

# Activity 2: Solar demonstrator for showing:

- Daytime solar path
- Annual motion of the Sun
- Study risings and settings
- Midnight Sun
- Travel anywhere if you know the latitude

# Solar demonstrator - Northern hemisphere

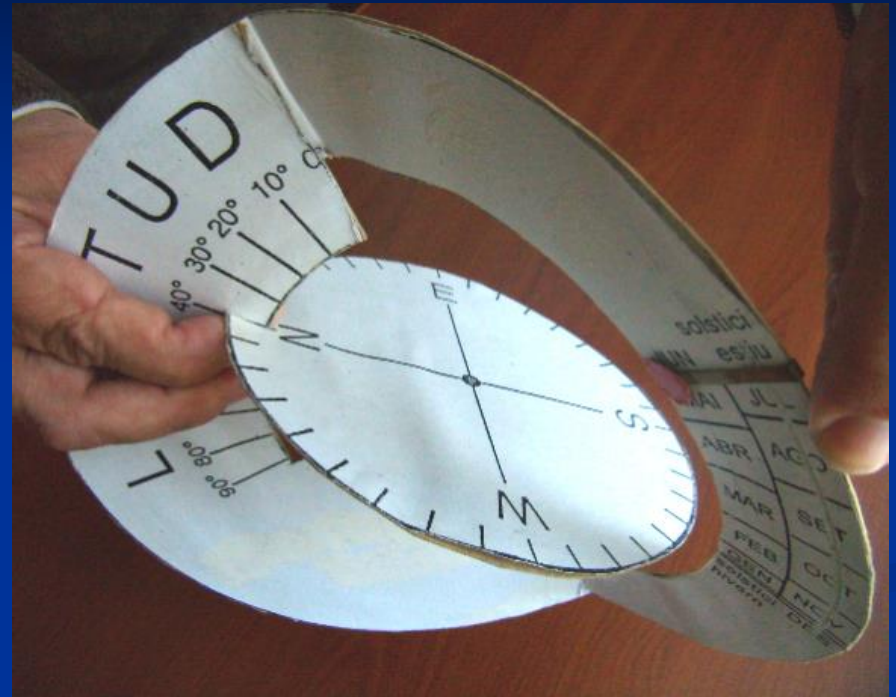

# Solar demonstrator - Southern hemisphere

# The paths of the Sun

# The Sun's path

- Place “N” at proper latitude
- Place the marker at required date
- Move date “arm” to show Sun’s path through a day
- Note the positions of Sunrise and Sunset

# Slope of the Sun's path

Lat 70°  
Enontekiö  
Finland

Lat 40°  
Gandía  
Spain

Lat 5°  
Ladrilleros  
Colombia

# Height of the Solar path

Summer and Winter in Norway

# Sunrises and Sunsets in different places

57° Riga, Latvia

40° Barcelona, Spain

2° Popayán, Colombia

winter

spring  
autumn

summer

# Sunrises and Sunsets in different places

2 ° Popayán, Colombia

- 19° La Paz, Bolivia

- 43° Esquel, Argentina

winter

spring  
autumn

summer

# Polar summer and winter

At the poles, the sun is above the horizon for half a year and below it for half a year.

# Midnight Sun

The Sun goes down until it passes the meridian and then begins to rise rather than set below the horizon.

# “Seasons at the equator”

The solar path is always almost perpendicular to the horizon and its length is almost the same throughout the year.

# Sun at the Zenith

At Solar Noon, your shadow is on your feet.

# Activity 3: Lunar demonstrator

- Why does the Moon smile in some places?

# Why - yes or no....

# Activity 3: Lunar demonstrator

# XXL demonstrators

Thank you very much  
for your attention!
