

## 200 courses in 10 years, a success for NASE

**N**ASE was constituted at the IAU General Assembly in Rio de Janeiro in August 2009 and, except for a couple of pilot courses with UNESCO that took place during the International Year of Astronomy 2009 (IYA-2009), the first NASE courses were established in 2010. Since NASE courses are given in the local language of the country, they began in America, since with two languages (Spanish and English) teachers could be trained throughout the continent, and not much later that they began to spread throughout the planet. In order to achieve the "globalization" of the program, it was necessary to translate its contents into each new language and this involved intense work. The course is currently taught in 14 languages (English, Spanish, Portuguese, Mandarin Chinese, Indonesian, Romanian, Persian, Catalan, French, Japanese, Russian, Mongolian, Armenian and Swahili).

**T**he COVID19 pandemic has represented an opportunity for NASE, which had to convert its courses, until then always presential, into online courses, together with the creation of the NASE boxes, thanks to a help from the European Union through the European Social Fund. These circumstances have allowed us to extend the courses so that we can better adapt to the connotations of each country. Virtuality has allowed us to reach teachers who, in a face-to-face course, would have serious travel problems. Thus, even with the mobile phone, they have been able to follow us from the most unsuspected places. With this new modality, it is possible to give courses with more than 150 participants while maintaining quality and effectiveness, because online courses are "1 to 1" courses, i. e. "1 teacher to 1 participant". As an instructor, the NASE trainer enters the participant's virtual dining room or living room, which can be repeated step-by-step with the activities being shown, and in a sense, is more personalized instruction. It is sufficient to advise them in advance of the materials they must have ready for use.

**B**ecause the structure and methodology of NASE is to use very simple, easily available and inexpensive materials, "interactive" teaching is made possible online. This facility is also positive for Local Working Groups (LWGs), which are starting online courses for the first time. If these LNGs cannot receive the NASE boxes, they can very easily replicate them with the support of NASE members. However, not everything is an advantage. Online teaching also has its drawbacks. For example, when making observations, when it is necessary to show somewhat large models or mock-ups, or when it is necessary to carry out experiments in the dark, because the light from the computer screen interferes with teaching the desired phenomena.

**T**he solution that NASE has found has consisted in the elaboration of videos of the phenomena that cannot be shown in a clear way, reproducing them during the course. These videos, usually a few minutes long, are shown by the instructor, who is the one who gives them a voice, since they are all silent. Handling 14 languages, it has turned out to be the most practical thing to edit them without explanations, and that the instructor does them in the language in which the course is given. Thus, 80 videos have been prepared, corresponding to almost all the practical activities of the course, which had the extra difficulty of being carried out during the pandemic period, with the participation of very few people. In fact, some videos have not yet been developed or recorded for this reason.

**T**he work developed in 2020 has been very extensive and complete: 5 more countries have joined the great family of NASE (Egypt, Togo, Philippines, Dominican Republic and Puerto Rico); more than 6000 teachers have been trained in 50 countries; and 12 new NASE working groups have been formed in different countries.

**S**ince 2018 NASE launches annual observation campaigns associated with simple experiments taken from NASE courses, in which teachers and groups of students from all over the world participate. In 2018 the "Herschel Experiment" campaign was launched, linked to the Day of Light (IDL), in 2019 on the occasion of the IAU's centenary, the "Power of the Sun" campaign was carried out, which also joined the IDL, and finally in 2020 the proposed campaign focused on "The Parallel Earth and the Seasons" linked to the International Day of Light as on previous occasions.

**W**henver possible, special groups, such as older adults, people with disabilities and discriminated populations, are invited to these experiences within the framework of the proposal of Astronomy for Equality, Inclusion and Diversity.

**1 Salinas (Ecuador)**  
**June 18-20, 2009**

**2 Lima (Perú)**  
**June 25-27, 2009**

**3 Barranquilla (Colombia)**  
**July 6-9, 2010**

**4 Managua (Nicaragua)**  
**July 12-15, 2010**

**5 Lima (Perú)**  
**July 17-20, 2010**

**6 Rosario (Argentina)**  
**October 12-15, 2010**

**7 Cañada de Gómez (Argentina)**  
**October 13-15, 2010**

**8 Venado Tuerto (Argentina)**  
**May 26-28, 2011**
