

NASE Seminar, 5/11/22 Athens - Greece

We had the pleasure and the honor, Rosa M. Ros the President of NASE, to visit Athens and gave a seminar on Astrobiology, through the organisation of M. Metaxa IAU/NOC for Greece, collaborating with V. Petridou from the 2nd DDE of Athens.

According to discussions and the evaluation questionnaire, it was a great success, having accomplished its targets 90% ! It was the first face to face seminar, and 30 teachers attended it, from the Attica area. The seminar included 4 workshops

1. Astronomy beyond visible, M. Metaxa
2. Solar System and Extrasolar planets Kon/dina Chrysanthakopoulou. Rosa M. Ros
3. Astrobiology, Rosa M. Ros -
4. The briefcase of the young Astronomer, A. Dapergolas – Varvara Perdilou

All 4 workshops, after a short introductory relevant lecture, they focused on simple hands-on experiments/observations, that can be well repeated during a lesson, always using simple, easily found material.

The variety of the introduced subjects and the simple approach of quite difficult topics was the most important feature of this seminar, that was appreciated by the attendees. On the other hand, lot of activities were presented, in order to cover the best way the topics. This was a problem since the participants could not follow all the activities, due to the compressed time given.

Overall we hope for a future fruitful, more extended seminar, with Rosa M. Ros to inspire us!
