

## CONCLUSIONS Latvia 2022

In December 2022, a group of Latvian physics teachers took part in NASE workshops on astrophysics. Although the workshops were held remotely, the participants worked practically in parallel, both making the models and carrying out the experiments. Participants were satisfied with the content of the workshop, as evidenced by their feedback during and after the sessions.

- *I really enjoyed the courses. It's nice to be told a bit of theory to refresh your knowledge, and then to show what your own experiment should look like. Great ideas, which I've seen as videos before but I hadn't thought to show it this simple way. (Rūta Apiņa)*
- *The presentations contain necessary information. The best part was these simple practical activities that could be done during the course. This means that I will also offer them to students to get them more interested in astronomy and physics. (Zigita Baldone)*
- *Thank you very much for the opportunity to take part in this course, as it is very important for me as an astronomy teacher in informal education to be able to improve my professional qualifications in the field of astronomy once a year. (Iveta Murāne)*
- *Very, very interesting courses! Passionate lecturers and such a twinkle in their eye! Courses are useful for sure, because these topics are not easy. The art is to present the complexity in a simple, illustrative way and to captivate the students. To make them want to create, understand and analyse for themselves. Thank you and I look forward to the next courses! (Vija Eglīte)*
