

Conclusions

Greece, March 2025

Organizer's remarks!!!

The seminar covered a range of disciplines, it was a STEM approach.

Workshops and lectures were the most preferred activities, while very few participants found any aspect unfavorable. The level of activities was deemed satisfactory (100 %). Some technical issues, such as sound quality and the hybrid format, were noted, but organizers made efforts to address them.

Participants valued the hands-on experiments which they found innovative for status in Greece. and suggested more theoretical analysis before activities. There was strong interest in a follow-up seminar with deeper exploration of topics. Overall, the event was considered useful, with a well-organized structure and engaging content. we want to see how much the participants were involved by asking them for a lesson scenario to involve them
