a) Exchanges and contacts with other participants?

Very Interesting	Interesting
79%	21%

b) What is your opinion about the usefulness of the course to their teaching?

Very useful	Useful
86%	14%

What especially criticize?

- I received enough information and have no critical remarks.
- I would like more activities that I could practically use at school. My school is very poor, we don't have much equipment, so I wanted more choices of activities that I could make with my own hands.
- There is nothing about the course to criticize. Everything was organised very well and the lectures were interesting.
- They are particularly critical of the lack of trustworthiness during observation.
- I liked everything. This training course was very beneficial for us.
- We (teachers) had a many question and we needed answers. But time was so short 1-1.5 hours wasn't enough for each theme. We needed more 3 days training or even +2 hours on each day.
- None
- nothing
- I liked everything. This training course was very beneficial for us.
- I have nothing to criticize, but I wish that kind of courses would be held more often, because for the beginners it is a good experience.
- I would add more practical tasks.
- Nothing
- I liked everything. This training course was very beneficial for us.
- I have nothing to criticize, but I wish that kind of courses would be held more often, because for the beginners it is a good experience.
- I would add more practical tasks.

What you would value more?

- The most important thing is that we gained knowledge in astronomy and will use this knowledge in our lessons later.
- I appreciate the hard work and energy that each of you put into our training.
- Through these lectures and workshops I gained the knowledge and skills in astronomy, that I think are valuable and can be used in teaching astronomy to the school students.
- The humanity, competence of the trainers and the learning and working environment they created.
- Practical workshops. I especially liked the phases of the moon.
- Lecturers were so professional. They know astronomy and more important how to learn others astronomy. They give us so good advices and workshops was simulation like we were kids and they were teachers. It was fun. We realized how kids feel when they discover new things themselves.
- It was a great experience. It is essential to have such courses in this field of study.
- Communication, professionalism of teachers
- Practical workshops. I especially liked the phases of the moon-Practical work.
- I really enjoyed lectures, because I learned more about the universe, solar system, black holes and etc.
- Transferring the activities provided by the training into the teaching process.

Other Observations

- Such trainings should be held more often.
- The courses were very well organized and the lectures/workshops were extremely interesting and of high quality. I would like to have such courses more often and the duration of courses can also be longer.
- Having new observations is important for a deeper understanding of events.
- It would be great if we had the opportunities to go to the observatory and would observe everything from it.
- I have to say one more thing. First time when we meet we have to introduce ourselves and I was shocked when I discover teacher were from every region of Georgia. This is so important. Education level is different and children deserve qualify teachers in every village. This training was so worthy for mee. I am glad I was part of it. We need more days like this.
- It would be great if we had the opportunities to go to the observatory and would observe everything from it.
- I would like to experience telescope observation and if this kind of course give me a chance to do it, I really appreciate it.
- It would be nice and useful to conduct such trainings for free
